EDUCATION

University of South Florida (USF), Tampa, FL

Graduated: December 2025

Bachelor of Science in Computer Engineering

Relevant Coursework: VLSI Testing, CMOS-VLSI Design, Computer Logic and Design, Operating Systems, Data Structures, Analysis of Algorithms, Computer Architecture, Hardware Accelerators for Machine Learning

Florida Atlantic University (FAU), Boca Raton, FL

Expected Graduation: December 2027

Master of Science in Artificial Intelligence

Starting Fall 2026

WORK EXPERIENCE

Carmine's Gourmet Market, Palm Beach Gardens, FL

February 2026 – Present

Pizza Chef

- Oversee high-volume pizza production in a fast-paced team environment, maintaining quality, consistency, and efficiency while handling customer interactions.
- Lead coordination of large and custom event orders, managing logistics, timelines, and client communication to ensure accurate and on-time delivery.

LEADERSHIP AND INVOLVEMENT

Men's Lacrosse Club at USF, Tampa, FL

May 2023 – May 2025

President and Captain

- Directed strategic planning and operations for a 40+ member organization, leading staff recruitment and applying structured evaluation to select high-impact team members.
- Managed six-figure budget, developing financial allocation strategies, budget deviations, and presented funding justifications to university organizations.

PROJECTS

Digital Circuit Fault Analysis Tool

August 2025 – January 2026

- Developed an interactive ATPG system in Python for gate-level circuits using the single stuck-at fault (SSF) model, enabling automated fault analysis and test generation.
- Researched and implemented fault collapsing and advanced test generation algorithms (D-Algorithm and PODEM) to optimize fault coverage and reduce test complexity.
- Built a circuit simulation engine and netlist parser to evaluate fault propagation, validate test vectors, and ensure correctness across benchmark circuits.

Sports Detection and Metric Tracking

July 2025 – August 2025

- Designed and trained computer vision models for ball detection using Roboflow, benchmarking architectures on accuracy, inference speed, and deployment efficiency.
- Engineered algorithms to estimate player kinematics and ball velocity from frame data, interpolating data to fill in missing object detection frames.
- Tuned model hyperparameters and evaluated performance using metrics such as mAP, precision/recall, and latency to ensure robustness and scalability.

KISS Budgeting App

March 2026 – Present

- Used AI-assisted development to independently build and ship a full-stack iOS budgeting app with a fully on-device, privacy-first data model.
- Owned the full launch pipeline including a custom support site, App Store metadata, and keyword optimization to maximize discoverability.
- Conducted Reddit and App Store competitive analysis to identify market gaps and define a differentiated, privacy-first feature set.

SKILLS

Technical Skills: Verilog, VHDL, Python, C#, Bash/Command Line, SQL, Git/GitHub, Microsoft Office

Soft Skills: Customer service, organization, multi-tasking, budgeting, event-planning, public speaking, research
